1	pubmed:36054980	<a href="#">The short-term predictive value of CD4<sup>±</sup> cells for combination therapy with high-dose dexamethasone and immunoglobulin in newly diagnosed primary immune thrombocytopenia patients</a>	Hongyun Liu Xiaoyan Liu Guoyang Zhang Jieyu Wang Duolan Naren Shuangfeng Xie Yiqing Li Danian Nie Zhixiong Li Liping Ma	CONCLUSIONS: Our results indicate that Th1, Th17, and Treg cells and IL-2 and IL-23 participate in the onset of ITP. Higher profiles of Th2, IL-2 and IL-23 may predict poor treatment outcomes. Higher levels of IL-17 and lower profile of Treg may predict sensitivity to HD DXM and IVIg combination therapy.	pmid:36054980 doi:10.1016/j.thromres.2022.08.014	Fri, 02 Sep 2022 06:00:00 -0400
2	pubmed:36054996	<a href="#">Comprehensive analysis to identify the RP11-478C19.2/ E2F7 axis as a novel biomarker for treatment decisions in clear cell renal cell carcinoma</a>	Kai Zeng Guoda Song Bingliang Chen Xintao Gao Chaofan Liu Jianping Miao Yajun Ruan Yang Luan Xin Chen Jihong Liu Qinyu Li Bo Liu	Clear cell renal cell carcinoma (ccRCC), accounting for 70-80% of all renal cell carcinomas, is a common malignancy. Survival rates decrease significantly in patients with advanced and metastatic ccRCC. Furthermore, ccRCC is less responsive to radiation and chemotherapy than other cancers. Therefore, targeted therapy and immunotherapy are particularly important for ccRCC management. A growing body of literature recognizes that competitive endogenous RNA (ceRNA) regulatory networks play a crucial...	pmid:36054996 doi:10.1016/j.tranon.2022.101525	Fri, 02 Sep 2022 06:00:00 -0400
3	pubmed:36054998	<a href="#">Molecular subtyping for lung adenocarcinoma and a novel prognostic model based on ligand-receptor pairs</a>	Dong Li Xuchen Ma Songlei Ou	CONCLUSIONS: The study showed that LR pairs played critical roles in LUAD development. The prognostic model could predict prognosis and guide personalized therapy for LUAD patients.	pmid:36054998 doi:10.1016/j.advms.2022.08.004	Fri, 02 Sep 2022 06:00:00 -0400
4	pubmed:36055049	<a href="#">Methylation subgroup and molecular heterogeneity is a hallmark of glioblastoma: implications for biopsy targeting, classification and therapy</a>	J Gempt F Withake A K Aftahy H S Meyer M Barz C Delbridge F Liesche-Starnecker G Prokop N Pfarr J Schlegel B Meyer C Zimmer B H Menze B Wiestler	CONCLUSIONS: (Epi)genetic intratumoral heterogeneity is a hallmark of GB, both at DNA methylation and CNV level. This intratumoral heterogeneity is of utmost importance for molecular classification as well as for defining therapeutic targets in this disease, as single biopsies might underestimate the true molecular diversity in a tumor.	pmid:36055049 doi:10.1016/j.esmoop.2022.100566	Fri, 02 Sep 2022 06:00:00 -0400
5	pubmed:36055084	<a href="#">Immunological profile in a pediatric population of patients with spherocytosis. A single-center experience</a>	Silvio Marchesani Letizia Sabatini Valentina Bertaina Olivia Marini Michela Ambrosi Margherita Di Mauro Matilde Cossutta Livia Schettini Mariachiara Lodi Gioacchino Andrea Rotulo Paolo Palma Giuseppe Palumbo Giulia Ceglie	Spherocytosis is a hereditary disease caused by the deficiencies of different membrane proteins of red blood cells. Currently, splenectomy is the main therapeutic strategy available, although it is accompanied by an increased risk of sepsis. Several evidences have supported the hypothesis of spleen dysfunction in patients with spherocytosis that haven't yet undergone splenectomy. The aim of this study is to furtherly characterize this aspect, by describing the immune subpopulations in peripheral...	pmid:36055084 doi:10.1016/j.bcmed.2022.102700	Fri, 02 Sep 2022 06:00:00 -0400

6	pubmed:36055113	<a href="#">Focus on immune checkpoint PD-1/PD-L1 pathway: New advances of polyphenol phytochemicals in tumor immunotherapy</a>	Kunjing Liu Qi Sun Qi Liu Huayao Li Wenfeng Zhang Changgang Sun	The rise of cancer immunotherapy, particularly the use of immune checkpoint inhibitors (ICIs), has significantly changed the clinical treatment paradigm for patients with cancer. The programmed death ligand 1 (PD-L1) protein in the tumor microenvironment (TME) binds to programmed cell death protein 1 (PD-1) on the surface of T cells and initiates the PD-1 / PD-L1 immunosuppressive program, which is currently one of the most promising target pathways for immunotherapy. However, problems such as...	pmid:36055113 doi:10.1016/j.biopha.2022.113618	Fri, 02 Sep 2022 06:00:00 -0400
7	pubmed:36055175	<a href="#">Hybrid M13 bacteriophage-based vaccine platform for personalized cancer immunotherapy</a>	Xue Dong Pei Pan Jing-Jie Ye Qiu-Ling Zhang Xian-Zheng Zhang	Although cancer vaccines exhibit great advances in the field of immunotherapy, developing an efficient vaccine platform for personalized tumor immunotherapy is still a major challenge. Here we demonstrate that a bioactive vaccine platform (HMP@Ag) fabricated with hybrid M13 phage and personal tumor antigens can facilitate delivery of antigens into lymph nodes and activate antigen-presenting cells (APCs) through the Toll-like receptor 9 (TLR9) signaling pathway, which boosts both innate and...	pmid:36055175 doi:10.1016/j.biomaterials.2022.121763	Fri, 02 Sep 2022 06:00:00 -0400
8	pubmed:36055212	<a href="#">Identification and single-base gene-editing functional validation of a cis-EPO variant as a genetic predictor for EPO-increasing therapies</a>	Charli E Harlow Josan Gandawijaya Rosemary A Bamford Emily-Rose Martin Andrew R Wood Peter J van der Most Toshiko Tanaka Hampton L Leonard Amy S Etheridge Federico Innocenti Robin N Beaumont Jessica Tyrrell Mike A Nalls Eleanor M Simonsick Pranav S Garimella Eric J Shiroma Niek Verweij Peter van der Meer Ron T Gansevoort Harold Snieder Paul J Gallins Dereje D Jima Fred Wright Yi-Hui Zhou Luigi Ferrucci Stefania Bandinelli Dena G Hernandez Pim van der Harst Vickas V Patel Dawn M Waterworth Audrey Y Chu Asami Oguro-Ando Timothy M Frayling	Hypoxia-inducible factor prolyl hydroxylase inhibitors (HIF-PHIs) are currently under clinical development for treating anemia in chronic kidney disease (CKD), but it is important to monitor their cardiovascular safety. Genetic variants can be used as predictors to help inform the potential risk of adverse effects associated with drug treatments. We therefore aimed to use human genetics to help assess the risk of adverse cardiovascular events associated with therapeutically altered EPO levels to...	pmid:36055212 doi:10.1016/j.ajhg.2022.08.004	Fri, 02 Sep 2022 06:00:00 -0400

9	pubmed:36055241	<a href="#">Whole-genome CRISPR screening identifies genetic manipulations to reduce immune rejection of stem cell-derived islets</a>	Elad Sintov Igor Nikolskiy Victor Barrera Jennifer Hyoje-Ryu Kenty Alexander S Atkin Dario Gerace Shannan J Ho Sui Kyle Boulanger Douglas A Melton	Human embryonic stem cells (hESCs) provide opportunities for cell replacement therapy of insulin-dependent diabetes. Therapeutic quantities of human stem cell-derived islets (SC-islets) can be produced by directed differentiation. However, preventing allo-rejection and recurring autoimmunity, without the use of encapsulation or systemic immunosuppressants, remains a challenge. An attractive approach is to transplant SC-islets, genetically modified to reduce the impact of immune rejection. To...	pmid:36055241 doi:10.1016/j.stemcr.2022.08.002	Fri, 02 Sep 2022 06:00:00 -0400
10	pubmed:36055280	<a href="#">Steroid Receptor Coactivator-Interacting Protein (SIP) Alleviates Ischemic Cerebral Infarction Damage Through the NF-B Pathway</a>	Min Yu Yan Li Xianpei Tan Qiao Hu	Ischemic stroke leads to high mortality and disability rates in humans. Cerebral ischemic injury has a severe complex pathophysiological mechanism. The abnormal release of inflammatory cytokines will cause brain tissue damage and destroy the blood-brain barrier integrity, which aggravates the process of brain injury. Therefore, attenuating the level of inflammatory response is critical for the therapy of cerebral ischemia injury. This study examined the rule of SIP treatment to support neuron...	pmid:36055280 doi:10.1055/a-1913-8088	Fri, 02 Sep 2022 06:00:00 -0400
11	pubmed:36055304	<a href="#">Pembrolizumab versus placebo as post-nephrectomy adjuvant therapy for clear cell renal cell carcinoma (KEYNOTE-564): 30-month follow-up analysis of a multicentre, randomised, double-blind, placebo-controlled, phase 3 trial</a>	Thomas Powles Piotr Tomczak Se Hoon Park Balaji Venugopal Thomas Ferguson Stefan N Symeonides Jaroslav Hajek Howard Gurney Yen-Hwa Chang Jae Lyun Lee Naveed Sarwar Antoine Thiery-Vuillemin Marine Gross-Goupil Mauricio Mahave Naomi B Haas Piotr Sawrycki Joseph E Burgents Lei Xu Kentaro Imai David I Quinn Toni K Choueiri KEYNOTE-564 Investigators	BACKGROUND: The first interim analysis of the KEYNOTE-564 study showed improved disease-free survival with adjuvant pembrolizumab compared with placebo after surgery in patients with clear cell renal cell carcinoma at an increased risk of recurrence. The analysis reported here, with an additional 6 months of follow-up, was designed to assess longer-term efficacy and safety of pembrolizumab versus placebo, as well as additional secondary and exploratory endpoints.	pmid:36055304 doi:10.1016/S1470-2045(22)00487-9	Fri, 02 Sep 2022 06:00:00 -0400
