1	pubmed:36108370	Organoselenium compounds as functionalizing agents for gold nanoparticles in cancer therapy	Sara Lorenzoni Sara Cerra Eduardo Angulo-Elizari Tommaso A Salamone Chiara Battocchio Martina Marsotto Francesca A Scaramuzzo Carmen Sanmartín Daniel Plano Ilaria Fratoddi	Gold nanoparticles (AuNPs) modified with four organoselenium compounds, i.e., 4-selenocyanatoaniline (compound 1), 4,4'-diselanediyl dianiline (compound 2), N-(4-selenocyanatophenyl)cinnamamide (compound 3), and N-(3-selenocyanatopropyl)cinnamamide (compound 4), were synthesized following two different approaches: direct conjugation and non-covalent immobilization onto hydrophilic and non-cytotoxic AuNPs functionalized with 3-mercaptopropylsulfonate (3MPS). Both free compounds and AuNPs-based...	pmid:36108370 doi:10.1016/j.colsurfb.2022.112828	Thu, 15 Sep 2022 06:00:00 -0400
2	pubmed:36108391	All-trans retinoic acid enhances the anti-tumour effects of fimaporfin-based photodynamic therapy	Judith Jing Wen Wong Susanne Lorenz Pål Kristian Selbo	The vitamin A metabolite all-trans retinoic acid (ATRA; tretinoin) has anticancer potential. However, lack of clinical success has prevented its approval for solid tumours. Herein, we propose combining short-term low-dose ATRA with fimaporfin-based photodynamic therapy (ATRA+PDT) for the improved treatment of solid cancers. Compared to monotherapies, ATRA+PDT induced synergistic cytotoxic responses including promotion of apoptosis in colon and breast carcinoma cell lines. Neither enhanced...	pmid:36108391 doi:10.1016/j.biopha.2022.113678	Thu, 15 Sep 2022 06:00:00 -0400
3	pubmed:36108503	Refining patient selection of MET-activated non-small cell lung cancer through biomarker precision	Gillianne G Y Lai Robin Guo Alexander Drilon Daniel Shao Weng Tan	Dysregulated MET signaling plays an important role in lung oncogenesis, tumor growth and invasiveness. It may occur through various mechanisms, such as MET overexpression or gene amplification or mutation, all of which can be detected by specific methods. The utility of MET overexpression as a biomarker remains unclear due to discrepancies in its occurrence and non-standardized cut-off thresholds. MET exon 14 skipping mutation (METex14) was established as a strong predictor of response to...	pmid:36108503 doi:10.1016/j.ctrv.2022.102444	Thu, 15 Sep 2022 06:00:00 -0400
4	pubmed:36108559	The value of disease-free survival (DFS) and osimertinib in adjuvant non-small-cell lung cancer (NSCLC): an international Delphi consensus report	M C Hardenberg B Patel C Matthews R Califano R Garcia Campelo C Grohe M H Hong G Liu S Lu F de Marinis M Pérol R A Soo B M Stiles M Tiseo M Tsuboi	CONCLUSIONS: Addressing the need for measures that reflect clinical benefit is essential to continue improving outcomes for NSCLC patients. To that end, this work provides a qualitative framework for clinicians to consider the clinical and patient relevance of DFS in adjuvant NSCLC and the benefit demonstrated in ADAURA thus far.	pmid:36108559 doi:10.1016/j.esmoop.2022.100572	Thu, 15 Sep 2022 06:00:00 -0400

5	pubmed:36108560	Two phase I studies of BI 836880, a vascular endothelial growth factor/angiopoietin-2 inhibitor, administered once every 3 weeks or once weekly in patients with advanced solid tumors	C Le Tourneau H Becker R Claus E Elez F Ricci R Fritsch Y Silber A Hennequin J Tabernero G Jayadeva D Luedtke M He N Isambert	CONCLUSIONS: The MTD of BI 836880 was 720 mg Q3W and 180 mg QW. BI 836880 was generally manageable and demonstrated preliminary efficacy.	pmid:36108560 doi:10.1016/j.esmoop.2022.100576	Thu, 15 Sep 2022 06:00:00 -0400
6	pubmed:36108571	Transcription factor NFE2L3 promotes the proliferation of esophageal squamous cell carcinoma cells and causes radiotherapy resistance by regulating IL-6	Tingting Chen Bing Xu Hui Chen Yuanyuan Sun Jiahang Song Xinchen Sun Xizhi Zhang Wei Hua	CONCLUSION: NFE2L3 can affect the radiosensitivity of ESCC cells through IL-6 transcription and IL-6/STAT3 signaling pathway. This makes NFE2L3 a putative target to regulate ESCC cell radiosensitivity.	pmid:36108571 doi:10.1016/j.cmpb.2022.107102	Thu, 15 Sep 2022 06:00:00 -0400
7	pubmed:36108580	Cinnamaldehyde-based poly(thioacetal): A ROS-awakened self-amplifying degradable polymer for enhanced cancer immunotherapy	Yalan Tu Xuan Xiao Yansong Dong Jisi Li Ye Liu Qingyu Zong Youyong Yuan	Although stimuli-responsive polymers have emerged as promising strategies for intelligent cancer therapy, limited polymer degradation and insufficient drug release remain a challenge. Here, we report a novel reactive oxygen species (ROS)-awakened self-amplifying degradable cinnamaldehyde (CA)-based poly(thioacetal) polymer. The polymer consists of ROS responsive thioacetal (TA) group and CA as the ROS generation agent. The self-amplified polymer degradation process is triggered by endogenous...	pmid:36108580 doi:10.1016/j.biomaterials.2022.121795	Thu, 15 Sep 2022 06:00:00 -0400
8	pubmed:36108581	Engineering mitochondrial uncoupler synergistic photodynamic nanoplatform to harness immunostimulatory pro-death autophagy/mitophagy	Quanwei Sun Jinming Yang Wei Shen Huiyu Lu Xiaohui Hou Yang Liu Yujing Xu Qinghua Wu Zihua Xuan Ye Yang Dengke Yin	Generally, autophagy/mitophagy, as a highly conserved lysosomal-based catabolic pathway, compromises the photodynamic therapy (PDT) efficiency by increasing the adaptation of tumor cells toward reactive oxygen species (ROS)-triggered protein damages and mitochondrial destruction. On the other hand, excessively activated autophagy/mitophagy cascades can provoke autophagic cell death and promote the endogenous antigens release of dying cells, thus playing a vital role in initiating the antitumor...	pmid:36108581 doi:10.1016/j.biomaterials.2022.121796	Thu, 15 Sep 2022 06:00:00 -0400
9	pubmed:36108594	Concomitant Immunosuppressive Therapy and Eculizumab Use in Patients with Paroxysmal Nocturnal Hemoglobinuria (PNH): An International PNH Registry Analysis	Anita Hill Régis Peffault de Latour Austin G Kulasekararaj Morag Griffin Robert A Brodsky Jaroslaw P Maciejewski Jing L- Marantz Philippe Gustovic Hubert Schrezenmeier	INTRODUCTION: Complement C5 inhibitor eculizumab is the first approved treatment for paroxysmal nocturnal hemoglobinuria (PNH), a rare hematologic disorder caused by uncontrolled terminal complement activation. Approximately 50% of patients with aplastic anemia (AA) have PNH cells. Limited data are available for patients with AA-PNH taking concomitant immunosuppressive therapy (IST) and eculizumab.	pmid:36108594 doi:10.1159/000526979	Thu, 15 Sep 2022 06:00:00 -0400

Herein, we develop a cross-correction-based strategy to enhance the efficiency of a gene therapy for CDKL5 deficiency disorder, a severe neurodevelopmental disorder caused by CDKL5 gene mutations. We created a gene therapy vector that produces an Igk-TATk-CDKL5 fusion...	pmid:36109452 doi:10.1007/s13311-022-01295-8	Thu, 15 Sep 2022 06:00:00 -0400
35	pubmed:36109471	The new progress in cancer immunotherapy	Ajmeri Sultana Shimu Hua-Xing Wei Qiangsheng Li Xucui Zheng Bofeng Li	The cross talk between immune and non-immune cells in the tumor microenvironment leads to immunosuppression, which promotes tumor growth and survival. Immunotherapy is an advanced treatment that boosts humoral and cellular immunity rather than using chemotherapy or radiation-based strategy associated with non-specific targets and toxic effects on normal cells. Immune checkpoint inhibitors and T cell-based immunotherapy have already exhibited significant effects against solid tumors and leukemia....	pmid:36109471 doi:10.1007/s10238-022-00887-0	Thu, 15 Sep 2022 06:00:00 -0400
36	pubmed:36109513	STING mediates nuclear PD-L1 targeting-induced senescence in cancer cells	Je-Jung Lee So Young Kim Songhee H Kim Seoyeon Choi Bin Lee Jeon-Soo Shin	Immune checkpoint molecule programmed death-ligand 1 (PD-L1) is overexpressed in cancer cells and imparts resistance to cancer therapy. Although membrane PD-L1 has been targeted for cancer immune therapy, nuclear PD-L1 was reported to confer cancer resistance. Therefore, it is important to regulate the nuclear PD-L1. The mechanisms underlying the therapeutic efficacy of PD-L1 targeting have not been well-established. Cellular senescence has been considered a pivotal mechanism to prevent cancer...	pmid:36109513 doi:10.1038/s41419-022-05217-6	Thu, 15 Sep 2022 06:00:00 -0400

68	pubmed:36110316	Modulating the surface potential of microspheres by phase transition in strontium doped barium titanate to restore the electric microenvironment for bone regeneration	Peng Wang Xiaosong Zhou Caili Lv Yu Wang Zongliang Wang Liqiang Wang Yongzhan Zhu Min Guo Peibiao Zhang	The endogenous electrical potential generated by native bone and periosteum plays a key role in maintaining bone mass and quality. Inspired by the electrical properties of bone, different negative surface potentials are built on microspheres to restore electric microenvironment for powerful bone regeneration, which was prepared by the combination of strontium-doped barium titanate (Sr-BTO) nanoparticles and poly (lactic-co-glycolic acid) (PLGA) with high electrostatic voltage field (HEV). The...	pmid:36110316 pmc:PMC9468715 doi:10.3389/fbioe.2022.988300	Fri, 16 Sep 2022 06:00:00 -0400
69	pubmed:36110319	Global research trends in extracellular vesicles based on stem cells from 1991 to 2021: A bibliometric and visualized study	Jianjing Lin Zhen Yang Li Wang Dan Xing Jianhao Lin	Objective: With the development of extracellular vesicles (EVs) based on stem cells research all over the world, our present study was aiming to discover the global trends in this field. Methods: All publications related to EVs based on stem cells from 1991 to 2021 were collected from the Science Citation Index-Expanded of Web of Science. Subsequently, the data were evaluated using the bibliometric methodology. In terms of visualized study, the VOS viewer software was performed to investigate the...	pmid:36110319 pmc:PMC9468424 doi:10.3389/fbioe.2022.956058	Fri, 16 Sep 2022 06:00:00 -0400
70	pubmed:36110321	Editorial: Advanced cell culture technologies to boost cell-based therapies, volume II	Dominik Egger Jan Hansmann Cornelia Kasper Dimitrios Kouroupis	No abstract	pmid:36110321 pmc:PMC9469591 doi:10.3389/fbioe.2022.999765	Fri, 16 Sep 2022 06:00:00 -0400
71	pubmed:36110328	lncRNA HOTAIR functions and therapeutic perspectives	Sabrina Garbo Marco Tripodi Cecilia Battistelli	Long non-coding RNAs (lncRNAs) exert central pathophysiological roles through the regulation of gene expression both at transcriptional and post-transcriptional levels. The characterization of lncRNAs' interactome is disclosing several new mechanisms that control disease onset and progression thus opening the way to the development of new pioneering therapeutic approaches. Regarding the lncRNA HOTAIR, found upregulated in several cancers and in liver fibrosis, it has been proved as a potential...	pmid:36110328 pmc:PMC9469907 doi:10.18632/oncoscience.563	Fri, 16 Sep 2022 06:00:00 -0400
72	pubmed:36110422	Iron corroded granules inhibiting vascular smooth muscle cell proliferation	Dongxu Qiu Yalan Deng Yanbin Wen Jun Yin Jie Feng Jiabing Huang Mingyu Song Gui Zhang Changqing Chen Jian Xia	In-stent restenosis after interventional therapy remains a severe clinical complication. Current evidence indicates that neointimal hyperplasia induced by vascular smooth muscle cell (VSMC) proliferation is a major cause of restenosis. Thus, inhibiting VSMC proliferation is critical for preventing in-stent restenosis. The incidence of restenosis was reduced in nitrided iron-based stents (hereafter referred to as iron stents). We hypothesized that the corroded granules produced by the iron stent...	pmid:36110422 pmc:PMC9468459 doi:10.1016/j.mtbio.2022.100420	Fri, 16 Sep 2022 06:00:00 -0400

73	pubmed:36110512	Genetic variants associated with steatohepatitis and liver fibrosis in HIV-infected patients with NAFLD	C Busca P Arias M Sánchez-Conde M Rico R Montejano L Martín-Carbonero E Valencia V Moreno J I Bernardino A Olveira M Abadía J González-García M L Montes	Background and aims: Nonalcoholic fatty liver disease (NAFLD) is a common cause of liver damage in people living with HIV (PLWHIV). Several studies have investigated candidate genes for susceptibility to NAFLD and to steatohepatitis. PNPLA3, TM6SF2, and MBOAT7-TMC4 have been reported to be associated with elevated ALT levels and the histologic parameters of nonalcoholic steatohepatitis and severity of fibrosis. Our objective was to analyze the relationship between PNPLA3, TM6SF2, and MBOAT7-TMC4...	pmid:36110512 pmc:PMC9468702 doi:10.3389/fphar.2022.905126	Fri, 16 Sep 2022 06:00:00 -0400
74	pubmed:36110516	The mechanism of action of a novel neuroprotective low molecular weight dextran sulphate: New platform therapy for neurodegenerative diseases like Amyotrophic Lateral Sclerosis	Ann Logan Antonio Belli Valentina Di Pietro Barbara Tavazzi Giacomo Lazzarino Renata Mangione Giuseppe Lazzarino Inés Morano Omar Qureshi Lars Bruce Nicholas M Barnes Zsuzsanna Nagy	Background: Acute and chronic neurodegenerative diseases represent an immense socioeconomic burden that drives the need for new disease modifying drugs. Common pathogenic mechanisms in these diseases are evident, suggesting that a platform neuroprotective therapy may offer effective treatments. Here we present evidence for the mode of pharmacological action of a novel neuroprotective low molecular weight dextran sulphate drug called ILB^(@). The working hypothesis was that ILB^(@) acts via the...	pmid:36110516 pmc:PMC9468270 doi:10.3389/fphar.2022.983853	Fri, 16 Sep 2022 06:00:00 -0400
75	pubmed:36110526	Intranasal delivery: An attractive route for the administration of nucleic acid based therapeutics for CNS disorders	Pranav Shah Manisha Lalan Kalyani Barve	The etiologies of several cardiovascular, inflammatory, neurological, hereditary disorders, cancer, and infectious diseases have implicated changes in the genetic set up or genetic mutations as the root cause. Nucleic acid based therapeutics (NBTs) is a new class of biologics that are known to regulate gene expression at the transcriptional and post-transcriptional level. The NBTs include oligonucleotides, nucleosides, antisense RNA, small interfering RNAs, micro RNA etc. In recent times, this...	pmid:36110526 pmc:PMC9469903 doi:10.3389/fphar.2022.974666	Fri, 16 Sep 2022 06:00:00 -0400
76	pubmed:36110528	Comprehensive bioinformatics analysis to identify a novel cuproptosis-related prognostic signature and its ceRNA regulatory axis and candidate traditional Chinese medicine active ingredients in lung adenocarcinoma	Shaohui Wang Nan Xing Xianli Meng Li Xiang Yi Zhang	Lung adenocarcinoma (LUAD) is the most ordinary histological subtype of lung cancer, and regulatory cell death is an attractive target for cancer therapy. Recent reports suggested that cuproptosis is a novel copper-dependent modulated form of cell death dependent on mitochondrial respiration. However, the role of cuproptosis-related genes (CRGs) in the LUAD process is unclear. In the current study, we found that DLD, LIAS, PDHB, DLAT and LIPA1 in 10 differentially expressed CRGs were central...	pmid:36110528 pmc:PMC9468865 doi:10.3389/fphar.2022.971867	Fri, 16 Sep 2022 06:00:00 -0400
77	pubmed:36110535	Co-Treatment With Resveratrol and FGF1 Protects Against Acute Liver Toxicity After Doxorubicin Treatment via the AMPK/NRF2 Pathway	Xianchou Xu Qingbo Liu Jiahao Li Mengjie Xiao Ting Gao Xiaohui Zhang Guangping Lu Jie Wang Yuanfang Guo Peinan Wen Junlian Gu	Doxorubicin (DOX), an anthracycline type of chemotherapy, is an effective therapy for several types of cancer, but serious side effects, such as severe hepatotoxicity, limit its use currently. Accordingly, an effective therapeutic strategy to prevent DOX-related hepatotoxicity is urgently needed. Through the inhibition of oxidative stress, fibroblast growth factor 1 (FGF1) is an effect therapy for a variety of liver diseases, but its use is limited by an increased risk of tumorigenesis due to...	pmid:36110535 pmc:PMC9468578 doi:10.3389/fphar.2022.940406	Fri, 16 Sep 2022 06:00:00 -0400

Marta Piasecka Martin Larsson Eleni Papakokkinou Lena Olsson Oskar Ragnarsson	CONCLUSIONS: Our findings indicate that ECS is underdiagnosed in patients with SCLC. Given the serious consequences of untreated ECS, the low detection rate highlights the need to improve endocrine work-up of patients with SCLC who present with biochemical and clinical features associated with ECS. Prospective studies are needed to establish a reliable assessment of the incidence of ECS and to optimise early detection strategies.	pmid:36111117 pmc:PMC9468750 doi:10.3389/fmed.2022.954033	Fri, 16 Sep 2022 06:00:00 -0400
103	pubmed:36111143	CD36 deficiency inhibits proliferation by cell cycle control in skeletal muscle cells	Jingyu Sun Yajuan Su Yaning Xu Duran Qin Qianhui He Haiping Qiu Jiatong Zhuo Weida Li	Obesity-related muscular dysfunction and relative muscle atrophy affect an increasing number of people. Elucidating the molecular mechanisms of skeletal muscle cell development and growth may contribute to the maintenance of skeletal muscle mass in obesity. Fatty acid translocase (FAT/CD36), as a long-chain fatty acid transport protein, is crucial for lipid metabolism and signaling. CD36 is known to function in myogenic differentiation, and whether it affects the proliferation of skeletal muscle...	pmid:36111143 pmc:PMC9468905 doi:10.3389/fphys.2022.947325	Fri, 16 Sep 2022 06:00:00 -0400
104	pubmed:36111167	ZFP36 Inhibits Tumor Progression of Human Prostate Cancer by Targeting CDK6 and Oxidative Stress	Dongbo Yuan Yinyi Fang Weiming Chen Kehua Jiang Guohua Zhu Wei Wang Wei Zhang Ganhua You Zhenyu Jia Jianguo Zhu	CONCLUSIONS: In PCa, ZFP36 might be a tumor suppressor that regulated growth, invasion, and migration of PCa cells. The lately discovered ZFP36-CDK6 axis demonstrated the molecular mechanism of PCa progression to a certain extent which might act as a new possible therapeutic target of PCa therapy.	pmid:36111167 pmc:PMC9470309 doi:10.1155/2022/3611540	Fri, 16 Sep 2022 06:00:00 -0400

In non-clinical settings, divers and astronauts may also receive supplemental oxygen. In addition, under current standard cell culture practices, cells are maintained in atmospheric oxygen, which is several times higher than what most cells experience in vivo. In...	pmid:36112262 doi:10.1007/s10565-022-09773-7	Fri, 16 Sep 2022 06:00:00 -0400
139	pubmed:36112263	Fbxo22 inhibits metastasis in triple-negative breast cancer through ubiquitin modification of KDM5A and regulation of H3K4me3 demethylation	Siqiaozhi Li Jinsong He Xin Liao Yixuan He Rui Chen Junhui Chen Sean Hu Jia Sun	The importance of Fbxo22 in carcinogenesis has been highly documented. Here, we discussed downstream regulatory factors of Fbxo22 in TNBC. RNA-sequencing was conducted for identifying differentially expressed genes, followed by construction of a regulatory network. Expression patterns of Fbxo22/KDM5A in TNBC were determined by their correlation with the prognosis analyzed. Then, regulation mechanisms between Fbxo22 and KDM5A as well as between KDM5A and H3K4me3 were assayed. After silencing and...	pmid:36112263 doi:10.1007/s10565-022-09754-w	Fri, 16 Sep 2022 06:00:00 -0400

144	pubmed:36112430	Phenomenological Approach to Cancer Cell Persistence	David A Kessler Herbert Levine	Drug persistence is a phenomenon by which a small percentage of cancer cells survive the presentation of targeted therapy by transitioning to a quiescent state. Eventually some of these persister cells can transition back to an active growing state and give rise to resistant tumors. Here we introduce a quantitative genetics approach to drug-exposed populations of cancer cells in order to interpret recent experimental data regarding inheritance of persister probability. Our results indicate that...	pmid:36112430 doi:10.1103/PhysRevLett.129.108101	Fri, 16 Sep 2022 06:00:00 -0400
145	pubmed:36112541	FDA Approval Summary: Mobocertinib for Metastatic Non-Small Cell Lung Cancer with EGFR Exon 20 Insertion Mutations	Elizabeth S Duke Liza Stapleford Nicole Drezner Anup K Amatya Pallavi S Mishra-Kalyani Yuan Li Shen Kimberly Maxfield Jeanne Fourie Zirkelbach Youwei Bi Jiang Liu Xinyuan Zhang Hezhen Wang Yuching Yang Nan Zheng Kelie Reece Emily Wearne Jacqueline J Glen Idara Ojofeitimi Barbara Scepura Abhilasha Nair Rama Kamesh Bikkavilli Soma Ghosh Reena Philip Richard Pazdur Julia A Beaver Harpreet Singh Martha Donoghue	On September 15, 2021, the U.S. Food and Drug Administration (FDA) granted accelerated approval to mobocertinib (Exkivity, Takeda Pharmaceuticals USA, Inc.) for the treatment of adult patients with locally advanced or metastatic non-small cell lung cancer (NSCLC) with epidermal growth factor receptor (EGFR) exon 20 insertion mutations, as detected by an FDA-approved test, whose disease has progressed on or after platinum-based chemotherapy. The approval was based on data from Study...	pmid:36112541 doi:10.1158/1078-0432.CCR-22-2072	Fri, 16 Sep 2022 06:00:00 -0400
146	pubmed:36112545	Pilot study of ONCOS-102 and pembrolizumab: remodeling of the tumor micro-environment and clinical outcomes in anti-PD1-resistant advanced melanoma	Alexander Shoushtari Anthony J Olszanski Marta Nyakas Thomas J Hornyak Jedd D Wolchok Victor Levitsky Lukasz Kuryk Thomas B Hansen Magnus Jäderberg	CONCLUSIONS: ONCOS-102 plus pembrolizumab was well tolerated and led to objective responses in patients with anti-PD-1 resistant advanced melanoma. ONCOS-102 promoted T-cell infiltration, particularly cytotoxic CD8+ T cells, which persisted at Week 9, driving clinical benefit. Further investigation of ONCOS-102 plus PD-1 blockade is warranted.	pmid:36112545 doi:10.1158/1078-0432.CCR-22-2046	Fri, 16 Sep 2022 06:00:00 -0400
147	pubmed:36112691	Deep learning reveals predictive sequence concepts within immune repertoires to immunotherapy	John-William Sidhom Giacomo Oliveira Petra Ross-MacDonald Megan Wind-Rotolo Catherine J Wu Drew M Pardoll Alexander S Baras	T cell receptor (TCR) sequencing has been used to characterize the immune response to cancer. However, most analyses have been restricted to quantitative measures such as clonality that do not leverage the complementarity-determining region 3 (CDR3) sequence. We use DeepTCR, a framework of deep learning algorithms, to reveal sequence concepts that are predictive of response to immunotherapy. We demonstrate that DeepTCR can predict response and use the model to infer the antigenic specificities...	pmid:36112691 doi:10.1126/sciadv.abq5089	Fri, 16 Sep 2022 06:00:00 -0400

Despite excellent data in urothelial cancer, little efficacy data is reported for EV in other Nectin-4 expressing tumors and EV therapy can produce significant toxicities in many patients,...	pmid:36112771 doi:10.1158/1535-7163.MCT-21-0875	Fri, 16 Sep 2022 06:00:00 -0400
150	pubmed:36112830	The Direct to Consumer Stem Cell Market and the Role of Primary Care Providers in Correcting Misinformation	Jennifer R Arthurs Charlene M Martin Lillie Zubin Master Shane A Shapiro	CONCLUSION: Effectively communicating risk information by primary care providers to patients is important given the harms reported from direct-to-consumer SCRI's. Correcting misinformation remains a priority when discussing SCRI's. Providers should strive to offer patients with additional resources such as the opportunity for consultation with a specialist or a consultation service dedicated to informing patients about regenerative medicine.	pmid:36112830 doi:10.1177/21501319221121460	Fri, 16 Sep 2022 06:00:00 -0400
151	pubmed:36112902	UCHL1 Impairs Periodontal Ligament Stem Cell Osteogenesis in Periodontitis	L Lin S Li S Hu W Yu B Jiang C Mao G Li R Yang X Miao M Jin Y Gu E Lu	Periodontitis comprises a series of inflammatory responses resulting in alveolar bone loss. The suppression of osteogenesis of periodontal ligament stem cells (PDLSCs) by inflammation is responsible for impaired alveolar bone regeneration, which remains an ongoing challenge for periodontitis therapy. Ubiquitin C-terminal hydrolase L1 (UCHL1) belongs to the family of deubiquitinating enzymes, which was found to play roles in inflammation previously. In this study, the upregulation of UCHL1 was...	pmid:36112902 doi:10.1177/00220345221116031	Fri, 16 Sep 2022 06:00:00 -0400

153	pubmed:36112982	Biopolymer gels as components of protective medium for cryopreservation of spermatogonial stem cells	Nataliia Volkova Mariia Yukhta Lyudmyla Stepaniuk Larisa Sokil Lyudmyla Chernyshenko Anatoliy Goltsev	Biopolymer gels attract a lot of attention in a field of biotechnology due to their excellent compatibility and degradation. Their application is also promising for cryopreservation of spermatogonial stem cells (SSCs) which is so necessary to preserve the fertility of young patients. The aim of the study was to determine the effectiveness of biopolymer gels as a component of cryopreservation medium for SSCs of immature rats at the stage of exposure to cryoprotectants. It was found that 30-min...	pmid:36112982 doi:10.1177/08853282221126784	Fri, 16 Sep 2022 06:00:00 -0400
