1	pubmed:36075130	<a href="#">An unusual neurological presentation in a patient with primary hypereosinophilic syndrome</a>	E Spina G T Maniscalco A Petraroli A Detoraki G Servillo A Ranieri A De Mase R Renna P Candelaresi A De Paulis V Andreone	Hypereosinophilic syndromes are characterized by an increased number of blood eosinophils (usually more than 1.5 × 10) infiltrating tissues and causing organ damage through over-production of pro-inflammatory cytokines with heterogeneous clinical presentation. Here we present a case of a 47 years old male, with an unremarkable previous medical history, with a sudden onset of subungual hemorrhage and low back pain. Admitted for right arm weakness and vomiting, was raised the suspicion of acute...	pmid:36075130 doi:10.1016/j.jstrokecerebrovasdis.2022.106703	Thu, 08 Sep 2022 06:00:00 -0400
2	pubmed:36075182	<a href="#">The beneficial effects of Polygonatum sibiricum Red. superfine powder on metabolic hypertensive rats via gut-derived LPS/TLR4 pathway inhibition</a>	Jie Su Yajun Wang Meiqiu Yan Ziwen He Yiqing Zhou Jie Xu Bo Li Wanfeng Xu Jingjing Yu Suhong Chen Guiyuan Lv	CONCLUSIONS: We demonstrated the beneficial effects and potential mechanisms of PSP in our MH rat model. Based on gut microbiota structure modulation and intestinal barrier improvements, PSP inhibited LPS-induced vascular TLR4/MyD88 signaling activation to improve vascular endothelial function, which in turn reduced blood pressure. Our study provides valuable insights on PSP therapy for MH.	pmid:36075182 doi:10.1016/j.phymed.2022.154404	Thu, 08 Sep 2022 06:00:00 -0400
3	pubmed:36075186	<a href="#">Autologous hematopoietic stem cell transplantation in neuromyelitis optica spectrum disorder: A systematic review and meta-analysis</a>	Fardin Nabizadeh Soroush Masrouri Hossein Sharifkazemi Mobin Azami Mahsa Nikfarjam Abdorreza Naser Moghadasi	CONCLUSION: According to the present study, AHSCT could be an alternative therapy for NMOSD in severe cases instead of conventional immunotherapies. However, physicians should pay attention to its serious complications. The diversity of results from the published trials on the efficacy and safety of AHSCT calls for further investigations on determining the ideal AHSCT conditioning and the characteristics of patients.	pmid:36075186 doi:10.1016/j.jocn.2022.08.020	Thu, 08 Sep 2022 06:00:00 -0400

5	pubmed:36075199	<a href="#">Stromal Vascular Fraction Reverses the Age-Related Impairment in Revascularization following Injury</a>	Gabrielle Rowe David S Heng Jason E Beare Nicholas A Hodges Evan P Tracy Walter L Murfee Amanda J LeBlanc	Adipose-derived stromal vascular fraction (SVF) has emerged as a potential regenerative therapy, but few studies utilize SVF in a setting of advanced age. Additionally, the specific cell population in SVF providing therapeutic benefit is unknown. We hypothesized that aging would alter the composition of cell populations present in SVF and its ability to promote angiogenesis following injury, a mechanism that is T cell-mediated. SVF isolated from young and old Fischer 344 rats was examined with...	pmid:36075199 doi:10.1159/000526002	Thu, 08 Sep 2022 06:00:00 -0400

6	pubmed:36075370	<a href="#">Discovery of pyrrolo[2,3-d]pyrimidine-based molecules as a Wee1 inhibitor template</a>	Changjun Chen Yeliu Wang Min-Qi Hu Hongjuan Li Xi Chen Gan Qiang Yinghui Sun Yan Zhu Binghui Li	In the past decade, Wee1 inhibition has received widespread attention as a cancer therapy. Our research aims to discover effective, selective and drug-like Wee1 inhibitors. Herein, a series of compounds with pyrrolo[2,3-d]pyrimidine-based heterocycles were designed, synthesized and confirmed to inhibit Wee1 kinase. The inhibitors afforded good potency in Wee1 Kinase inhibitory activity in enzymatic assays. These compounds showed strong proliferation inhibition against NCI-1299 cell lines and had...	pmid:36075370 doi:10.1016/j.bmcl.2022.128973	Thu, 08 Sep 2022 06:00:00 -0400
7	pubmed:36075472	<a href="#">Engineered extracellular vesicles: A novel platform for cancer combination therapy and cancer immunotherapy</a>	Mahdi Ahmadi Mehdi Hassanpour Jafar Rezaie	Extracellular vesicles (EVs), phospholipid membrane-bound vesicles, produced by most cells, contribute to cell-cell communication. They transfer several proteins, lipids, and nucleic acids between cells both locally and systemically. Owing to the biocompatibility and immune activity of EVs, therapeutic approaches using these vesicles as drug delivery systems are being developed. Different methods are used to design more effective engineered EVs, which can serve as smart tools in cancer therapy...	pmid:36075472 doi:10.1016/j.lfs.2022.120935	Thu, 08 Sep 2022 06:00:00 -0400
8	pubmed:36075487	<a href="#">Overexpression of nucleotide metabolic enzyme DUT in hepatocellular carcinoma potentiates a therapeutic opportunity through targeting its dUTPase activity</a>	Mingjing Xu Yue Liu Ho Lee Wan Alissa M Wong Xiaofan Ding Wenxing You Wing Sze Lo Kelvin K-C Ng Nathalie Wong	Uracil misincorporation during DNA replication is a major cell toxic event, of which cancer cells overcome by activating the dUTPase enzyme. The DUT gene is the only known dUTPase in human. Despite reports on common upregulations in cancers, the role of DUT in human hepatocellular carcinoma (HCC) remains largely undetermined. In this study, we investigated the mechanism underlying DUT biology in HCC and tumor susceptibility to drug targeting dUTPase. Overexpression of DUT was found in 42% of HCC...	pmid:36075487 doi:10.1016/j.canlet.2022.215898	Thu, 08 Sep 2022 06:00:00 -0400
9	pubmed:36075517	<a href="#">SIK2 protects against renal tubular injury and the progression of diabetic kidney disease</a>	Bingyao Liu Linlin Zhang Hang Yang Xinyu Chen Hongting Zheng Xiaoyu Liao	Despite optimal medical therapy, many patients with diabetic kidney disease (DKD) progress to end-stage renal disease. The identification of new biomarkers and drug targets for DKD is required for the development of more effective therapies. The apoptosis of renal tubular epithelial cells is a key feature of the pathogenicity associated with DKD. SIK2, a salt-inducible kinase, regulates important biological processes, such as energy metabolism, cell cycle progression and cellular apoptosis. In...	pmid:36075517 doi:10.1016/j.trsl.2022.08.012	Thu, 08 Sep 2022 06:00:00 -0400
10	pubmed:36075521	<a href="#">Efficacy of Malachite green mediated Photodynamic therapy on treatment of Cutaneous Leishmaniasis: in vitro study</a>	Sercin Ozlem-Caliskan Rahsan Ilikci-Sagkan Hatice Karakas Sevgi Sever Cansu Yildirim Msra Balikci Hatice Ertabaklar	CONCLUSIONS: This study demonstrated that antileishmanial effects through mitochondrial dysfunction, cell cycle arrest, and apoptosis-like cell death to parasites. This study aims to test the PDT with MG and to verify if the parasites can be affected by this therapy. Therefore, MG-mediated PDT may provide a promising approach for L. tropica promastigotes.	pmid:36075521 doi:10.1016/j.pdpdt.2022.103111	Thu, 08 Sep 2022 06:00:00 -0400

37	pubmed:36077711	<a href="#">CK1/RUNX2 Axis in the Bone Marrow Microenvironment: A Novel Therapeutic Target in Multiple Myeloma</a>	Anna Fregnani Lara Saggin Ketty Giancesin Laura Quotti Tubi Marco Carraro Gregorio Barilà Greta Scapinello Giorgia Bonetto Maria Pesavento Tamara Berno Antonio Branca Carmela Gurrieri Renato Zambello Gianpietro Semenzato Livio Trentin Sabrina Manni Francesco Piazza	Multiple myeloma (MM) is a malignant plasma cell (PC) neoplasm, which also displays pathological bone involvement. Clonal expansion of MM cells in the bone marrow causes a perturbation of bone homeostasis that culminates in MM-associated bone disease (MMABD). We previously demonstrated that the S/T kinase CK1 sustains MM cell survival through the activation of AKT and -catenin signaling. CK1 is a negative regulator of the Wnt/-catenin cascade, the activation of which promotes osteogenesis by...	pmid:36077711 doi:10.3390/cancers14174173	Fri, 09 Sep 2022 06:00:00 -0400
38	pubmed:36077714	<a href="#">Convection-Enhanced Delivery of Antiangiogenic Drugs and Liposomal Cytotoxic Drugs to Heterogeneous Brain Tumor for Combination Therapy</a>	Ajay Bhandari Kartikey Jaiswal Anup Singh Wenbo Zhan	Although convection-enhanced delivery can successfully bypass the blood-brain barrier, its clinical performance remains disappointing. This is primarily attributed to the heterogeneous intratumoral environment, particularly the tumor microvasculature. This study investigates the combined convection-enhanced delivery of antiangiogenic drugs and liposomal cytotoxic drugs in a heterogeneous brain tumor environment using a transport-based mathematical model. The patient-specific 3D brain tumor...	pmid:36077714 doi:10.3390/cancers14174177	Fri, 09 Sep 2022 06:00:00 -0400

AAV5-miHTT is an adeno-associated virus serotype 5-based vector expressing an engineered HTT-targeting microRNA (miHTT). Preclinical studies demonstrate the brain-wide spread of AAV5-miHTT following a single intrastriatal injection, which is partly mediated by neuronal transport. miHTT has been previously associated with extracellular vesicles (EVs), but whether EVs...	pmid:36078156 doi:10.3390/cells11172748	Fri, 09 Sep 2022 06:00:00 -0400

70	pubmed:36078158	<a href="#">Mineralocorticoid Receptor Antagonists Mitigate Mitral Regurgitation-Induced Myocardial Dysfunction</a>	Wei-Ting Chang Yu-Wen Lin Chin-Yu Chen Zhih-Cherng Chen Jhih-Yuan Shih Chia-Ching Wu Chwan-Yau Luo Ping-Yen Liu	Mitral regurgitation (MR), the disruption of the mitral valve, contributes to heart failure (HF). Under conditions of volume overload, excess mineralocorticoids promote cardiac fibrosis. The mineralocorticoid receptor antagonist spironolactone is a potassium-sparing diuretic and a guideline-recommended therapy for HF, but whether it can ameliorate degenerative MR remains unknown. Herein, we investigate the efficacy of spironolactone in improving cardiac remodeling in MR-induced HF compared with...	pmid:36078158 doi:10.3390/cells11172750	Fri, 09 Sep 2022 06:00:00 -0400
71	pubmed:36078173	<a href="#">Transplantation of Human Induced Pluripotent Stem Cell-Derived Neural Progenitor Cells Promotes Forelimb Functional Recovery after Cervical Spinal Cord Injury</a>	Yiyan Zheng Chrystine M Gallegos Haipeng Xue Shenglan Li Dong H Kim Hongxia Zhou Xugang Xia Ying Liu Qilin Cao	Locomotor function after spinal cord injury (SCI) is critical for assessing recovery. Currently, available means to improve locomotor function include surgery, physical therapy rehabilitation and exoskeleton. Stem cell therapy with neural progenitor cells (NPCs) transplantation is a promising reparative strategy. Along this line, patient-specific induced pluripotent stem cells (iPSCs) are a remarkable autologous cell source, which offer many advantages including: great potential to generate...	pmid:36078173 doi:10.3390/cells11172765	Fri, 09 Sep 2022 06:00:00 -0400
72	pubmed:36078177	<a href="#">Differentiation Capacity of Bone Marrow-Derived Rat Mesenchymal Stem Cells from DsRed and Cre Transgenic Cre/loxP Models</a>	Hsiang-Ching Tseng Menq-Rong Wu Chia-Hsun Lee Jong-Kai Hsiao	Cre/loxP recombination is a well-established technique increasingly used for modifying DNA both in vitro and in vivo. Nucleotide alterations can be edited in the genomes of mammalian cells, and genetic switches can be designed to target the expression or excision of a gene in any tissue at any time in animal models. In this study, we propose a system which worked via the Cre/loxP switch gene and DsRed/emGFP dual-color fluorescence imaging. Mesenchymal stem cells (MSCs) can be used to regenerate...	pmid:36078177 doi:10.3390/cells11172769	Fri, 09 Sep 2022 06:00:00 -0400

137	pubmed:36082942	<a href="#">Elucidating the role of PRMTs in prostate cancer using open access databases and a patient cohort dataset</a>	Ioanna Maria Grypari Ioanna Pappa Thomas Papastergiou Vasiliki Zolota Vasiliki Bravou Maria Melachrinou Vasileios Megalooikonomou Vasiliki Tzelepi	Protein arginine methylation is an understudied epigenetic mechanism catalyzed by enzymes known as Protein Methyltransferases of Arginine (PRMTs), while the opposite reaction is performed by Jumonji domain- containing protein 6 (JMJD6). There is increasing evidence that PRMTs are deregulated in prostate cancer (PCa). In this study, the expression of two PRMT members, PRMT2 and PRMT7 as well as JMJD6, a demethylase, was analyzed in PCa. Initially, we retrieved data from The Cancer Genome Atlas...	pmid:36082942 doi:10.14670/HH-18-513	Fri, 09 Sep 2022 06:00:00 -0400
138	pubmed:36082964	<a href="#">Programmable Assembly of Multivalent DNA-Protein Superstructures for Tumor Imaging and Targeted Therapy</a>	Zhen Xu Tianhui Shi Fengye Mo Wenqian Yu Yu Shen Qunying Jiang Fuan Wang Xiaoqing Liu	Programmable DNA materials hold great potential in biochemical and biomedical researches, yet the complicated synthesis, and the low stability and targeting efficacy in complex biological milieu limit their clinical translations. Here we show a one-pot assembly of DNA-protein superstructures as drug vehicles with specifically high affinity and stability for targeted therapy. This is achieved by biomimetic assembly of programmable polymer DNA wire into densely packed DNA nanosphere with an...	pmid:36082964 doi:10.1002/anie.202211505	Fri, 09 Sep 2022 06:00:00 -0400
